Depositor for liquids
BPL

The depositor for liquids can be integrated with the process line.

The machine is managed from a software and synchronized with the conveyor belt.

Its function is to wet products (placed on the conveyor belt) by dosing liquids such as coffee, sugar syrups, ecc.

It's possible to select shape, number and size of the areas to cover with liquids simply customising the heads and nozzles.

Furthermore, flow and pressure can be adjusted according to your needs.

Moreover the doser can be disassembled and cleaned easily without tools.

Technical features:

Tank capacity: 90 lt

Height: 2070 mm

Width: 930 mm

Length: 1500 mm

Adjustable dosing height: 350 mm

Pneumatic operation

Head with nozzles (quantity, shape and size)

Flow and pressure adjustment

Stainless steel structure with wheels

Applications:

Dosing liquids;

Sponge cake.
