Dosing unit belted
DFM

The dosing tape allows to garnish the food, sprinkling on its surface the grained product, with the intensity and quantity desired.

It's a trolley machine, can be positioned above a conveyor belt, and therefore integrated to a process line.

It consists of a hopper with a conveyor belt and rotating combs to make a uniform layer of product to be deposited.

The speed of combs and belt are adjustable independently to generate the desired intensity of discharge.

It can operate in mode continuous or step-step, as set by the control program of the process line.

Its characteristic of extreme flexibility and ease of use is amplified thanks to the possibility of complete disassembly of the machine manually without the aid of tools.

That's an important advantage, to be able to fulfill in a short time the cleaning operations.

Between the products that are able to process with the DFA there are:

- or mozzarella cheese (diced or julienne)
- chocolate chips
- vegetables
- shelled peanuts

Technical features:

Height: 1760 mm

Width: 1450 mm

Length: 1250 mm

Hopper capacity: lt 30

Max dosing length: 600 mm
