Dumplings making machine
SGA

The Dumplings making machine (SGA) has been designed to make the “grandmother’s gnocchi”, pressed on the grater and embossed to hold sauces. The SGA machine extrudes the “gnocco” from the dough of potatoes and gives it the typical shape. The machine is composed by modular elements, one through four, according to the required productivity. The structure is made of stainless steel or plastic materials in compliance with food safety standards.

Technical features:

Max production: 70-280 kg/h

Applications:

Shaping and embossing dumplings.
